Abstracts

Home automation is building automation for a home, called a smart home or smart house. A home automation system will control lighting, climate, entertainment systems, and appliances. It may also include home security such as access control and alarm systems.When connected with the Internet, home devices are an important constituent of the Internet of Things.A home automation system typically connects controlled devices to a central hub or 'gateway'. The user interface for control of the system uses either wall-mounted terminals, tablet or desktop computers, a mobile phone application, or a Web interface, that may also be accessible off-site through the Internet.
This report elaborates the market size, market characteristics, and market growth of the Home Automation industry, and breaks down according to the type, application, and consumption area of Home Automation. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
