Abstracts

A video projector is a picture projector that receives a video signal and projects the corresponding image on a projection screen using a lens. Home theater projectors—as opposed to multimedia/home theater crossovers, which from a feature perspective can be treated as multimedia projectors—place the emphasis on image quality above all else. They run lower brightness—say 1800 lumens average—and have the most zoom of any projector type that features built-in lenses.

This report elaborates the market size, market characteristics, and market growth of the Home Theater Projectors industry, and breaks down according to the type, application, and consumption area of Home Theater Projectors. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Home Theater Projectors in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
