## Abstracts

Directional drilling, also known as horizontal directional drilling, is the minimum impact non-excavation method of installing an underground facility (such as a pipe, pipe or cable) with a relatively shallow arc or radius along a defined underground path using a surface-emitting drill. Directional boring/hard disk drives offer significant environmental advantages over traditional cutting and covering pipes/utilities. Conventional use of this technique when traditional trenching or excavation is not practical or requires minimal surface interference

This report elaborates the market size, market characteristics, and market growth of the Horizontal Directional Drilling industry, and breaks down according to the type, application, and consumption area of Horizontal Directional Drilling. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Horizontal Directional Drilling in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
