Abstracts

Horizontal Grinders were first introduced in the late 90's as an alternative to the tub grinder. Similar to tub grinders, there are a variety of sizes and horsepower, designed to handle land-clearing debris, bark, brush, logs, stumps, wood construction and demolition ("C&D") material,

leaves, etc. Operators typically employ horizontal grinders to reduce or recycle wood and greenwaste. The most common type of horizontal grinders utilize a long, narrow infeed with a belt, chain or slats and an infeed roller that feed material horizontally into the mill; thus the name "horizontal grinder".

Horizontal grinders employ a cylindrical shaped hammermill at the heart of the machine similar to tub grinders. Below and behind the hammermill are 2" to 6" screens which permit the material to pass through once the desired product size is achieved. A conveyor belt or augers located below the screens transports the finished product away from the mill to the discharge conveyor which carries the material away from the machine. Horizontal grinders are commonly mounted onto a rubber tire mounted frame with a fifth wheel-hitch. Although due to the greater use of horizontal grinders for land-clearing, track mounted horizontal grinders are also common. In some cases pintle hitches are offered but due to the weight associated with horizontal grinders most are fifth-wheel arrangements.

Horizontal grinders are typically loaded from the top with an excavator or grapple. Due to the relatively narrow infeed, pre-arranged material allows for maximum feeding efficiency. Due to the horizontal feed system, horizontal grinders are less likely to eject material than tub grinders. The grinding mechanism in horizontal grinders is not

exposed in a way that will easily allow material to escape out of the machine. Consequently, they have become popular as an option for operating in populated areas. This report elaborates the market size, market characteristics, and market growth of the Horizontal Grinder industry, and breaks down according to the type, application, and consumption area of Horizontal Grinder. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Horizontal Grinder in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.

In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
