Abstracts

HPHT (High Pressure, High Temperature) is a diamond color enhancement process performed only on candidate Type 2a brown diamonds with the highest structural integrity and clarity grades. The process mimics the same geological conditions the earth uses (heat and pressure) to transform their brownish color to colorless and white grades.

This report elaborates the market size, market characteristics, and market growth of the HPHT Diamond industry, and breaks down according to the type, application, and consumption area of HPHT Diamond. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for HPHT Diamond in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
