## **Abstracts**

Human primary cells are the cells isolated directly from human tissue via enzymatic or mechanical method. Primary cells provide unaltered and natural experimental results, as they are physiologically normal. Normal primary cells retain almost all native cellular functions in vitro, such as morphology, cellular function, growth characteristics, cellular markers, signaling and genetic integrity.

This report elaborates the market size, market characteristics, and market growth of the Human Primary Cells industry, and breaks down according to the type, application, and consumption area of Human Primary Cells. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Human Primary Cells in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
