## **Abstracts**

Hydraulic Brakes for motor vehicles have improved much over the years and now form the basis of the stopping system on almost every car, truck, motorcycle and ATV. Hydraulic brakes provides leverage ratios far higher than mechanical brake systems, they are compact and easy to maintain and service and do not suffer from wear in linkages etc. The brake fluids used in hydraulic brakes must be changed and flushed periodically as most hydraulic brakes use glycol fluids which are hygroscopic which means they absorb moisture. Another great advantage of hydraulic brakes is that flexible, even rubber fluid transfer lines can be used making it easy to route the hydraulics around hard to reach areas on a vehicle. Some rubber lines or hoses in hydraulic brakes are braided with steel casing to allow them to accept higher line pressures and the prevent chafing of the rubber lines inside.

This report elaborates the market size, market characteristics, and market growth of the Hydraulic Brake industry, and breaks down according to the type, application, and consumption area of Hydraulic Brake. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Hydraulic Brake in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.

In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
