Abstracts

Hydraulic fittings connect tubes, pipes, or hoses to components (pumps, valves, cylinders, and so on) or together to create a system through which hydraulic fluid can flow without leaking. Fittings are meant to withstand high pressures and be leak resistant. Fitting variations allow designers to change the direction of flow, split flows, and change the elevation of lines.
This report elaborates the market size, market characteristics, and market growth of the Hydraulic Fitting industry, and breaks down according to the type, application, and consumption area of Hydraulic Fitting. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Hydraulic Fitting in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
