Abstracts

Non-explosive demolition agents are commercial that are an alternative to explosives and gas pressure blasting products in demolition, mining, and quarrying.[1] To use non-explosive demolition agents in demolition or quarrying, holes are drilled in the base rock as they would be for use with conventional explosives. A slurry mixture of the non-explosive demolition agent and water is poured into the drill holes. Over the next few hours the slurry expands, cracking the rock in a pattern somewhat like the cracking that would occur from conventional explosives.

Non-explosive demolition agents offer many advantages including that they are silent and do not produce vibration the way a conventional explosive would. In some applications conventional explosives are more economical than non-explosive demolition agents. In many countries these are available without restriction, unlike explosives which are highly regulated.

These agents are much safer than explosives, but they have to be used as directed to avoid steam explosions during the first few hours after being placed.

This report elaborates the market size, market characteristics, and market growth of the Hydraulic Non-Explosive Demolition Agent industry, and breaks down according to the type, application, and consumption area of Hydraulic Non-Explosive Demolition Agent. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for

Hydraulic Non-Explosive Demolition Agent in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
