Abstracts

Hydrocarbons are called natural refrigerants because they occur in the earth's material cycle, e.g. as a byproduct of natural gas production, or in oil refineries. They were first used as refrigerants in the early 1920s, but replaced by fully and partially halogenated fluorinated hydrocarbons in the early 1950s (CFC/ HFC). Being non-toxic and non-flammable, these substances were often referred to as 'safety refrigerants'. Meanwhile, it has become generally known that CFC and HCFC have a fatal effect on the environment and the global climate, resulting in them being banned.

This report elaborates the market size, market characteristics, and market growth of the Hydrocarbon Refrigerant industry, and breaks down according to the type, application, and consumption area of Hydrocarbon Refrigerant. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Hydrocarbon Refrigerant in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
