Abstracts

Hydroponics is a new type of hydroponic flower cultivated using soilless cultivation techniques and cultivated with nutrient solution. The core is that the nutrient solution replaces the soil to provide water, fertilizer, gas, heat and other growth factors to the flower plant, to meet the conditions required for the growth of the flower plant, and to ensure that the plant completes the entire life cycle. The nutrient solution is a concentrate with a height of 1:50 and must be diluted before use.

This report elaborates the market size, market characteristics, and market growth of the Hydroponic Nutrients industry, and breaks down according to the type, application, and consumption area of Hydroponic Nutrients. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
