Abstracts

A hypervisor or virtual machine monitor (VMM) is computer software, firmware or hardware that creates and runs virtual machines. A computer on which a hypervisor runs one or more virtual machines is called a host machine, and each virtual machine is called a guest machine. The hypervisor presents the guest operating systems with a virtual operating platform and manages the execution of the guest operating systems. This report elaborates the market size, market characteristics, and market growth of the Hypervisor industry, and breaks down according to the type, application, and consumption area of Hypervisor. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Hypervisor in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
