Abstracts

Intermediate bulk containers (IBCs) have the volume capacity more than that of drums and less than that of tanks or transporting containers. For the transportation of liquids, granular products, food items, and some other materials, IBC liners are incorporated to prevent direct contact from the IBC and also to prevent the primary product from contamination.

This report elaborates the market size, market characteristics, and market growth of the IBC Liner industry, and breaks down according to the type, application, and consumption area of IBC Liner. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for IBC Liner in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
