## **Abstracts**

Intracranial atherosclerotic disease (ICAD) is the most common cause of stroke worldwide. It is the progressive narrowing of the cerebral arteries within the skull (intracranial). Strokes may be caused either by clots or by bleeding (hemorrhage) that deprives brain cells of oxygen, leading to their death. About Intracranial atherosclerotic disease, it has been identified that it can start at a young age and progress slowly. It may not cause any symptoms until the arteries are narrow enough to reduce blood flow to the brain. Because this disease often progresses unnoticed, the first symptoms may occur during a temporary blockage of blood flow to the brain.

This report elaborates the market size, market characteristics, and market growth of the ICAD (Intracranial Atherosclerotic Disease) Pathology industry, and breaks down according to the type, application, and consumption area of ICAD (Intracranial Atherosclerotic Disease) Pathology. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for ICAD (Intracranial Atherosclerotic Disease) Pathology in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.

In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
