Abstracts

Ice blasting was invented in the 1980s as a cheaper, safer way of finishing metal using high-pressure blasting systems. Wet ice blasting systems use frozen water particles combined with compressed air, while dry ice blasting units use frozen carbon dioxide pellets. These processes don't leave any chemical residue, making them useful for cleaning more delicate machinery or food-preparation equipment that can't be filled with blasting medium.

This report elaborates the market size, market characteristics, and market growth of the Ice Blasting Machine industry, and breaks down according to the type, application, and consumption area of Ice Blasting Machine. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Ice Blasting Machine in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
