## Abstracts

An angiographic or diagnostic catheter is intended for use in angiographic procedures. It delivers radiopaque media and therapeutic agents to selected sites in the vascular system. It is also used to lead a guidewire or a catheter to the target site. The Outlook 4 Fr (1.40 mm) has a large lumen to allow contrast media to be injected at high flow rates and is designed to exhibit good torque control. The catheter inserter on the pigtail catheter can be used to straighten the catheter tip for easier insertion into the sheath. After catheter insertion, it can be peeled off the catheter. Fixed strain relief prevents the catheter from kinking at its proximal end.

This report elaborates the market size, market characteristics, and market growth of the Imaging Diagnostic Catheter industry, and breaks down according to the type, application, and consumption area of Imaging Diagnostic Catheter. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
