Abstracts

Immune repertoire refers to the sub-type proteins an organism's immune system creates. Immune systems in vertebrates have six key types of proteins namely: immunoglobulin (2) and T cell receptors (4). Immune repertoire sequencing enables researchers and scientist to examine and understand adaptive immune-mediated diseases. Immune repertoire sequencing is also widely applicable in biomarker discovery, infectious disease research, asthma and allergy research, and cancer immunotherapy.

This report elaborates the market size, market characteristics, and market growth of the Immune Repertoire Sequencing industry, and breaks down according to the type, application, and consumption area of Immune Repertoire Sequencing. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Immune Repertoire Sequencing in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
