## Abstracts

An air quality monitor is a device that measures the level of common air pollutants. Monitors are available for both indoor and outdoor settings. Indoor air quality monitors are typically sensor based instruments. Some of them are able to measure ppb levels and come as either mixed gas or portable units. Sensor based instruments and air quality monitoring systems are used widely in outdoor ambient applications. This report elaborates the market size, market characteristics, and market growth of the Indoor Air Quality Monitoring industry, and breaks down according to the type, application, and consumption area of Indoor Air Quality Monitoring. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
