## **Abstracts**

An optical fiber or optical fibre is a flexible, transparent fiber made by drawing glass (silica) or plastic to a diameter slightly thicker than that of a human hair. Optical fibers are used most often as a means to transmit light between the two ends of the fiber and find wide usage in fiber-optic communications, where they permit transmission over longer distances and at higher bandwidths (data rates) than electrical cables.

This report elaborates the market size, market characteristics, and market growth of the Industrial Fiber Optic industry, and breaks down according to the type, application, and consumption area of Industrial Fiber Optic. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Industrial Fiber Optic in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
