Abstracts

An Industrial Gas Spring is a type of spring that, unlike a typical metal spring, uses a compressed gas, contained in a cylinder and compressed by a piston, to exert a force.

An Industrial Gas Spring in compression is similar to a coil spring but normally much flatter. Compression Industrial Gas Springs have the rod out and the load from the application forces the rod in. Typically mounted so they are rod down in the position in which they spend the most time. This allows the oil contained within Industrial Gas Spring to lubricate the rod seals. By varying the design of the piston, seals and bearings and by modifying the quantity and viscosity of the lubricating oil can provide Industrial Gas Springs with different operating characteristics.

This report elaborates the market size, market characteristics, and market growth of the Industrial Gas Spring industry, and breaks down according to the type, application, and consumption area of Industrial Gas Spring. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Industrial Gas Spring in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
