Abstracts

Industrial gases are supplied in a range of different cylinders depending on the properties of the gas. Some are delivered at high pressures, while others are offered only at low pressures. Thus, the properties of an industrial gas decide the way in which it is supplied to the customer. For example, gases such as nitrogen, oxygen, hydrogen, and argon can be readily compacted into a cylinder at pressures up to 200 bar.

Metal fabrication covers a wide range of activities from general welding to highly specialized laser welding processes. Companies in this industry require a responsive, flexible, single-source partner that supports the full application and equipment spectrum, combining both traditional and new cutting, welding and coating processes. Industrial gases for metals & metal fabrication play an important role in majority of these processes. They are cost effective and are environment friendly. In addition, they are energy efficient and improve productivity.

This report elaborates the market size, market characteristics, and market growth of the Industrial Gases- Metals & Metal Fabrication industry, and breaks down according to the type, application, and consumption area of Industrial Gases- Metals & Metal Fabrication. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
