Abstracts

Sulfuric acid also known as vitriol, is a mineral acid composed of the elements sulfur, oxygen and hydrogen, with molecular formula H_2SO_4 . It is a colorless, odorless, and syrupy liquid that is soluble in water, in a reaction that is highly exothermic. Its corrosiveness can be mainly ascribed to its strong acidic nature, and, if at a high concentration, its dehydrating and oxidizing properties. It is also hygroscopic, readily absorbing water vapor from the air. Upon contact, sulfuric acid can cause severe chemical burns and even secondary thermal burns; it is very dangerous even at moderate concentrations.

This report elaborates the market size, market characteristics, and market growth of the Industrial Sulfuric Acid industry, and breaks down according to the type, application, and consumption area of Industrial Sulfuric Acid. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Industrial Sulfuric Acid in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
