Abstracts

The vision sensor first performs the inspection by locating the part in the image and then by looking for specific features on the part. Once the field of view (FOV) is set, the operator can run the vision tool over the entire range of targets to examine the presence, integrity or orientation of multiple features in a single image. Even if the data output is binary, aggregated data can be used downstream to improve the process and perform diagnostics on specific units of work.

This report elaborates the market size, market characteristics, and market growth of the Industrial Vision Sensors industry, and breaks down according to the type, application, and consumption area of Industrial Vision Sensors. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
