Abstracts

Robot welding is the use of mechanized programmable tools (robots), which completely automate a welding process by both performing the weld and handling the part. Processes such as gas metal arc welding, while often automated, are not necessarily equivalent to robot welding, since a human operator sometimes prepares the materials to be welded. Robot welding is commonly used for resistance spot welding and arc welding in high production applications, such as the automotive industry.
This report elaborates the market size, market characteristics, and market growth of the Industrial Welding Robot industry, and breaks down according to the type, application, and consumption area of Industrial Welding Robot. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Industrial Welding Robot in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
