## **Abstracts**

Pheromone are the chemical molecules secreted by insects in the environment. The pheromones are released to signal their other mates for a food source or as an alert. Thus, these pheromones act as a communication between the insects spread across the field. Integrated pest management (IPM) is a method or approach towards preventing damage from pests in the farm field. IPM pheromones are synthetically manufactured which exactly imitates the naturally secreted pheromones. Thus, it helps in growing the crops in a healthy manner. The pheromones can be classified based on the interaction medium as aggregation, alarm or sex pheromones. IPM pheromones create an unfavourable situation for the further growth of pest. The IPM pheromones are used in one of the four control approaches as biological control, cultural control, mechanical and physical control and chemical control. The chemicals used for manufacturing of pheromones are semiochemicals. Depending on the pest type such as moth, beetles etc. the pheromones are manufactured specifically for that type of pest. This report elaborates the market size, market characteristics, and market growth of the Integrated Pest Management (IPM) Pheromones industry, and breaks down according to the type, application, and consumption area of Integrated Pest Management (IPM) Pheromones. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Integrated Pest Management (IPM) Pheromones in a special period.
