Abstracts

ITMS (Intelligent Traffic Management System) is used for managing and controlling traffic lights based on photoelectric sensors placed on one side of the road. The suitable space between each sensor is selected by the traffic control authority. As a result, the traffic control authority can supervise vehicle that are running toward a particular traffic direction and can thereby manage transmission of information signal to microcontrollers which are fixed to the traffic control cabinet.

This report elaborates the market size, market characteristics, and market growth of the Intelligent Traffic Management System (ITMS) industry, and breaks down according to the type, application, and consumption area of Intelligent Traffic Management System (ITMS). The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
