Abstracts

Intravascular ultrasound is an imaging technique which entails the use of a catheter with an ultrasound probe at its tip. This technique is used to view the blood vessels from the inside and the endothelium of blood vessels in living beings. The most significant uses of intravascular ultrasound involve atherosclerosis imaging and the assessment of atheromatous plaque built up in the epicardial coronary artery. Intravascular ultrasound is also used during stenting procedures for an optimized and accurate outcome.

This report elaborates the market size, market characteristics, and market growth of the Intravascular Ultrasound System (IVUS) industry, and breaks down according to the type, application, and consumption area of Intravascular Ultrasound System (IVUS). The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Intravascular Ultrasound System (IVUS) in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
