Abstracts

Energy harvesting has been used for decades in devices such as solar panels and bicycle dynamos. However, the development of a new generation of energy harvesting transducers and advancements in energy storage devices is giving rise to a wealth of new applications that previously were not possible. With the availability of ultra-low-power MCUs and new low-power wireless protocols, energy harvesting could play a vital role in enabling the IoT by eliminating the need for batteries in many IoT end devices.
This report elaborates the market size, market characteristics, and market growth of the IoT Energy-Harvesting industry, and breaks down according to the type, application, and consumption area of IoT Energy-Harvesting. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for IoT Energy-Harvesting in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
