Abstracts

The Internet of Things (IoT) is an information carrier such as the Internet and traditional telecommunication networks, enabling all ordinary objects that can perform independent functions to realize interconnected networks.

IoT is a network of physical objects that contain embedded software, sensors, and IP technology to enable them to interact with and gather data on their environment. The data collected from this process are then transmitted over the internet and can be analyzed to improve both cost and operational efficiency.

One of the goals of IoT is to help integrate two segments: Machine-to-machine (M2M) communication services and operational technology. M2M communication services link connected devices to a central system autonomously, without the need for human interaction, while operational technology monitors and controls the devices (enterprises or end-users).

This report elaborates the market size, market characteristics, and market growth of the IoT (Internet of Things) industry, and breaks down according to the type, application, and consumption area of IoT (Internet of Things). The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for IoT (Internet of Things) in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
