Abstracts

IoT security is the area of endeavor concerned with safeguarding connected devices and networks in the Internet of things (IoT).

The Internet of Things involves the increasing prevalence of objects and entities – known, in this context as things -- provided with unique identifiers and the ability to automatically transfer data over a network. Much of the increase in IoT communication comes from computing devices and embedded sensor systems used in industrial machine-to-machine (M2M) communication, smart energy grids, home and building automation, vehicle to vehicle communication and wearable computing devices. This report elaborates the market size, market characteristics, and market growth of the IoT Security industry, and breaks down according to the type, application, and consumption area of IoT Security. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for IoT Security in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
