Abstracts

2,2,4-Trimethylpentane, also known as isooctane or iso-octane, is an organic compound with the formula $(\text{CH}_3)_3\text{CCH}_2\text{CH}(\text{CH}_3)_2$. It is one of several isomers of octane (C_8H_{18}). This particular isomer is the standard 100 point on the octane rating scale (the zero point is n-heptane). It is an important component of gasoline, frequently used in relatively large proportions to increase the knock resistance of the fuel.

This report elaborates the market size, market characteristics, and market growth of the Isooctane industry, and breaks down according to the type, application, and consumption area of Isooctane. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Isooctane in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
