Abstracts

Kanban is a method for managing the creation of products with an emphasis on continual delivery while not overburdening the development team. It is a visual project and process management technique that uses cards or signals to represent work items. A work item can be a task/process step, a deliverable that requires a sub-set of tasks or a project within a larger project/program. Using kanban cards to represent tasks is helpful when there are lots of moving parts and pieces to a project.

This report elaborates the market size, market characteristics, and market growth of the Kanban Software industry, and breaks down according to the type, application, and consumption area of Kanban Software. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
