Abstracts

A Kitchen hood, extractor hood, or range hood is a device containing a mechanical fan that hangs above the stove or cooktop in the kitchen. It removes airborne grease, combustion products, fumes, smoke, odors, heat, and steam from the air by evacuation of the air and filtration. In commercial kitchens exhaust hoods are often used in combination with fire suppression devices so that fumes from a grease fire are properly vented and the fire is put out quickly. Commercial vent hoods may also be combined with a fresh air fan that draws in exterior air, circulating it with the cooking fumes, which is then drawn out by the hood.

This report elaborates the market size, market characteristics, and market growth of the Kitchen Hood industry, and breaks down according to the type, application, and consumption area of Kitchen Hood. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
