Abstracts

KVM over IP is a server management technology designed to support user input and output on a system over a network connection. This eliminates cumbersome and limited KVM hardware switches and allows administrators to configure and monitor a large number of local or remote systems using virtually any Web browser with standard ActiveX or Java plug-ins. In fact, KVM over IP allows administrators to handle many system management tasks in local and remote data centers without leaving the office. This eliminates travel time and expense at remote sites and greatly reduces support response time.
This report elaborates the market size, market characteristics, and market growth of the KVM over IP industry, and breaks down according to the type, application, and consumption area of KVM over IP. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for KVM over IP in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
