Abstracts

Inkjet technology is a reliable and economical method for marking and encoding a wide range of products. Inkjet coders are most commonly used in the packaging industry to differentiate products. These are non-contact printing encoders that generate date and lot numbers and use any information for a variety of packaging products, including containers, carton labels, and more.

A label applicator is a machine used to apply a pressure sensitive label directly to a product container, bottle, package or bucket. The label roll is loaded into the applicator and applied to the product.

This report elaborates the market size, market characteristics, and market growth of the Label Applicators and Inkjet Coders industry, and breaks down according to the type, application, and consumption area of Label Applicators and Inkjet Coders. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
