## Abstracts

Automation workcells are special integrated systems in laboratories. These systems improve efficiency, reduce operational cost and time, minimize manpower involvement, and track the process from end-to-end with a single point entry and a disposal exit. The entire process of testing, verification, routing, scheduling, and disposal is all done within the system without any external operation.

This report elaborates the market size, market characteristics, and market growth of the Laboratory Automation Workcells industry, and breaks down according to the type, application, and consumption area of Laboratory Automation Workcells. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
