Abstracts

Land Seismic Equipment is used to carry out seismic data acquisition in onshore regions. A vibrator source is used to create shock waves that traverse through various rocks below the surface. These shock waves that reflect off the subsurface rock formations and back to the surface are recorded using geophones. Cables or transmitters are used to transfer information from geophones to a recorder truck. Seismic waves indicate the geological nature of the area surveyed and indicate the possibility of oil or gas reserve.

This report elaborates the market size, market characteristics, and market growth of the Land Seismic Equipment and Acquisition industry, and breaks down according to the type, application, and consumption area of Land Seismic Equipment and Acquisition. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Land Seismic Equipment and Acquisition in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
