## Abstracts

Sheep are the only source of lanolin oil. A sheep gets sheared once yearly and provides about 10 pounds of wool annually. Lanolin is an amber-colored fatty substance taken from the sheep's wool before it is washed. Lanolin is made up of wax esters, fatty acids and other organic compounds. It is solid at room temperature and melts at 100 to 107 degree Fahrenheit. Lanolin oil derives from lanolin but is a liquid at room and body temperature. Lanolin oil softens the skin and is a good humectan. Lanolin Wax is High melting wax fraction separated from lanolin USP. Widely used in industrial applications for its emulsifying power, uniform consistency and ability to inhibit crystallization of other waxes. When combined with ethylene and propylene oxides in various ratios, lanolin wax provides increased water solubility and performs as non-ionic surfactant.

This report elaborates the market size, market characteristics, and market growth of the Lanolin Oil and Lanolin Wax industry, and breaks down according to the type, application, and consumption area of Lanolin Oil and Lanolin Wax. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Lanolin Oil and Lanolin Wax in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
