Abstracts

Glass-ceramic from the LAS system is a mechanically strong material and can sustain repeated and quick temperature changes up to 800–1000 °C. The dominant crystalline phase of the LAS glass-ceramics, HQ s.s., has a strong negative coefficient of thermal expansion (CTE), keatite-solid solution as still a negative CTE but much higher than HQ s.s.

This report elaborates the market size, market characteristics, and market growth of the LAS Glass Ceramics industry, and breaks down according to the type, application, and consumption area of LAS Glass Ceramics. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
