Abstracts

Toner is a powder mixture used in laser printers and copiers that typically form printed text and images on paper through a toner cartridge. Most of the granular plastics, the early mixture only added carbon powder and iron oxide, but later developed a mixture containing polypropylene, fumed silica and various minerals for triboelectric charging. Toners using plant-derived plastics also exist as a substitute for petroleum plastics. The toner particles are melted by the heat of the fuser to adhere to the paper.
Laser toner cartridges for color copiers and printers are available in cyan, magenta, yellow, and black (CMYK), which can be mixed to produce a very large color gamut.
This report elaborates the market size, market characteristics, and market growth of the Laser Toner industry, and breaks down according to the type, application, and consumption area of Laser Toner. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Laser Toner in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
