## **Abstracts**

Light-emitting Diodes (LEDs) are lighting sources for general lighting applications with ten times as efficient as compared to incandescent lighting. Such attribute combined with their long working life and reliability has made them the suitable choice for next generation of lighting systems including emergency, backlight, automotive, indoor and outdoor. To ensure accurate operation and to control the light intensity, LEDs need an efficient driver, normally implemented by power electronics-based conversion stages to match the LED characteristics with the AC grid voltage and to generate a controllable and high-quality light.

This report elaborates the market size, market characteristics, and market growth of the Led Lights industry, and breaks down according to the type, application, and consumption area of Led Lights. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Led Lights in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.

In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
