Abstracts

Lithium-ion (Li-ion) polymer batteries are rechargeable batteries that are increasingly used in portable and mobile devices. These high-efficiency battery technologies integrate more energy into smaller sizes than almost any other battery type. The Li-Ion Battery Protection IC is a preventive device designed to provide accurate monitoring and trigger thresholds for overcurrent protection in high discharge current operation or battery overcharge conditions. These batteries are integrated with power MOSFETs to prevent large external short-circuit currents and protect circuits from excessive discharge currents.

This report elaborates the market size, market characteristics, and market growth of the Li-ion Battery Protection ICs industry, and breaks down according to the type, application, and consumption area of Li-ion Battery Protection ICs. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
