Lightning is one of the natural most destructive and powerful phenomena that causes major problems to various industries such as buildings destruction, and damage critical electronic systems. In order to serve these issues companies are developing novel lightning protection products to serve consumer needs. Lightning protection products delivers complete protection against lightning risk, safeguard critical equipment along with transient overvoltage protection with an effective, low resistance route from lightning protection system to earth. The function of lightning protection products is to intercept, conduct, and disperse of lightning strike safely to earth surface and without such products building structure, electrical systems are all at high risk. Lightning protection products can prevent from lost or destroyed data, repair work mainly costly for remote or unmanned installations, equipment damage, loss of essential services, and fire & electric shock hazards. The main components of lightning protection systems are rods, cables, and air terminals which work together to carry immense current away from the structure, prevents from fire, and most appliance damage.
