## Abstracts

The dimmer switch was developed to meet the different needs of people at different times for the brightness of the light. In principle, the electronic dimmer switch controls the degree of conduction by controlling and changing the phase angle of the thyristor. The dimmer switch is the time when the power source flows through the load, thus changing the input voltage and current of the electric light source to obtain light output of different intensity, and the single fire line input wiring mode can directly replace the existing wall switch.

This report elaborates the market size, market characteristics, and market growth of the Lights Dimmer Switches industry, and breaks down according to the type, application, and consumption area of Lights Dimmer Switches. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Lights Dimmer Switches in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
