## Abstracts

Linear Accelerator is a device which destroys the cancer cells without affecting the surrounding normal cells. Linear accelerator (LINAC) functions in a way that it accelerates electrons through a linear tube with high speeds resulting in x-rays emission. Higher x-rays generate large electronic potential which is useful in longer accelerating cavity resulting in greater efficiency for destruction of tumors. Linear accelerator (LINAC) can be utilized on any part of human body with greater efficiency for brain tumor applications.

This report elaborates the market size, market characteristics, and market growth of the Linear Accelerator industry, and breaks down according to the type, application, and consumption area of Linear Accelerator. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Linear Accelerator in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
