## Abstracts

Safflower oil is a popular cooking oil that comes from the seeds of the safflower plant. Some research suggests it may have some health benefits when people use it in the diet and on the skin. Safflower oil may be a more healthful option than olive oil when cooking at high temperatures, thanks to its high smoke point and neutral flavor. High-linoleic safflower oil contains higher quantities of polyunsaturated fats. It is not suitable for heating but is ideal for use in salad dressings.

This report elaborates the market size, market characteristics, and market growth of the Linoleic Safflower Oil industry, and breaks down according to the type, application, and consumption area of Linoleic Safflower Oil. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Linoleic Safflower Oil in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.

In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
