Abstracts

In biology and biochemistry, a lipid is a biomolecule that is soluble in nonpolar solvents. Non-polar solvents are typically hydrocarbons used to dissolve other naturally occurring hydrocarbon lipid molecules that do not (or do not easily) dissolve in water, including fatty acids, waxes, sterols, fat-soluble vitamins (such as vitamins A, D, E, and K), monoglycerides, diglycerides, triglycerides, and phospholipids. Lipid has a functional and significant role in the food because of its contribution to palatability, satiety, and nutrition. Consequently, quality of the lipid is a concern among consumers due to its association with numerous health problems. Lipid oxidation is a major problem in many areas of the food industry. Delaying lipid oxidation not only prolongs the shelf-life of a product, but also decreases raw material waste, nutritional loss, and widens the range of lipids that can be used in particular products.

This report elaborates the market size, market characteristics, and market growth of the Lipids industry, and breaks down according to the type, application, and consumption area of Lipids. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Lipids in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
