## Abstracts

Liquid rocket engines or LREs are among the more popular rocket propulsion systems used today. Most engines currently employ a two-component propellant configuration in which the fuel and oxidant are stored in separate tanks. The propellant can be forced into the combustion chamber with a high pressure gas (commonly referred to as a pressure supply system) or it can be withdrawn from the tank using a pump.

This report elaborates the market size, market characteristics, and market growth of the Liquid Propulsion Rocket Engines industry, and breaks down according to the type, application, and consumption area of Liquid Propulsion Rocket Engines. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Liquid Propulsion Rocket Engines in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
