## Abstracts

Liquid scintillation counting is the measurement of activity of a sample of radioactive material which uses the technique of mixing the active material with a liquid scintillator (e.g. Zinc sulfide) , and counting the resultant photon emissions. The purpose is to allow more efficient counting due to the intimate contact of the activity with the scintillator. It is generally used for alpha and beta particle detection.

This report elaborates the market size, market characteristics, and market growth of the Liquid Scintillation Analyzer industry, and breaks down according to the type, application, and consumption area of Liquid Scintillation Analyzer. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
