## Abstracts

Lithium chloride is a chemical compound with the formula LiCl. The salt is a typical ionic compound, although the small size of the Li<sup>+</sup> ion gives rise to properties not seen for other alkali metal chlorides, such as extraordinary solubility in polar solvents (83.05 g/100 mL of water at 20 °C) and its hygroscopic properties.

This report elaborates the market size, market characteristics, and market growth of the Lithium Chloride industry, and breaks down according to the type, application, and consumption area of Lithium Chloride. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Lithium Chloride in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
